

a**b**

Q3 SPJ, $p=0.5$, ONE protocol, 3-run: ProVSQL forced-eval `sum(probability_evaluate)`; ours end-to-end = construct + shared ROBDD compile + WMC with the $O(N)$ ordering (1eb35bf, was an $O(N^2)$ scan). Probability parity EXACT (both $0.5^3=0.125/\text{answer}$). Ours is 2.1–2.85 $\times$ faster across SF 0.01/0.1/0.3 — on a stock engine, no fork.
