

# Oxigraph — end-to-end exact PQE (construct + compile + WMC)

■ construct (engine)   
 ■ compile + WMC (client)   
 ◆ ours end-to-end   
 ◇ NPCS end-to-end   
 × NPCS X (non-monotone)   
 - - - 300 s construct cap

Real construct (this engine's B/R/N/C matrix) + engine-independent compile+WMC (byte-identical circuit, E10). Construct dominates; on selective monotone WatDiv NPCS end-to-end is lower — but OPTIONAL is X (non-monotone: NPCS has no end-to-end). Grouped, not stacked, on a log axis.
